INTRODUCTION

Cumulated Index Medicus (*CIM*) is a cumulation of the 12 monthly issues of *Index Medicus* (Jan.–Dec. 1973) produced and published by the National Library of Medicine. The 1973 *CIM* contains citations to more than 208,000 articles from the biomedical literature, including a section of citations to medical reviews.

JOURNALS INDEXED

Included in this volume is a list of all serials that were accepted for indexing in *Index Medicus* during 1973. *Index Medicus* coverage is limited to periodical literature. Original articles are indexed, as well as those letters, editorials, biographies, and obituaries that have substantive contents. Abstracts of articles are never indexed. Proceedings of congresses, symposia, and similar materials are not indexed unless published in periodicals. In certain journals which cover fields other than biomedicine, only those articles related to biomedicine are selected for inclusion in *Index Medicus*.

In the selection of journals for indexing, the National Library of Medicine is advised by a group of distinguished physicians, medical editors, and medical librarians. The Library indexes the periodical literature that has been judged most useful to *Index Medicus* users. It is not possible to include every journal that might contain useful articles, and more journals were recommended for inclusion than could actually be indexed.

An effort is made to maintain a reasonable balance of subject matter. The inclusion of a journal should not be construed as indicating that it is considered superior to one that is not indexed; the omission of a journal does not necessarily reflect on its quality.

SUBJECT HEADINGS

Medical Subject Headings (*MeSH*) is the list of about 8,500 technical terms used by the National Library of Medicine for controlled access to biomedical literature. *MeSH*, reprinted in its entirety in this cumulation, was published as Part II of the January 1973 *Index Medicus*.

The user of *Cumulated Index Medicus* will find it helpful to examine *Medical Subject Headings* (*MeSH*) and the introduction to *MeSH* before searching *CIM*.

INDEXING

Journal articles are analyzed by highly trained literature analysts. The content of each article is described by assigning terms selected from NLM's *Medical Subject Headings*. In indexing, the analyst assigns as many subject headings as are necessary to describe adequately the content of each article.

Each article is cited in *Index Medicus* only under those subject headings which represent the most immportant concepts of the article. All subject headings are stored in MEDLARS (Medical Literature Analysis and Retrieval System), the Library's computer-based file of citations, for future use in machine retrieval.

In using *Cumulated Index Medicus*, bear in mind that citations are published only under those terms appearing in *MeSH*. If the medical concept you have in mind is not a medical subject heading, you will need to find the *MeSH* equivalent. E.g., if you are interested in German measles, citations to articles on that subject will appear in *Cumulated Index Medicus* under its *MeSH* equivalent, RUBELLA.

When articles are indexed for *Index Medicus*, the most specific terms available in *MeSH* are used. Thus, if an article is concerned with erythromycin, it would be indexed under that term, rather than the broader "antibiotics." Under the latter term, one would find only: (a) articles dealing with antibiotics generally, (b) those that deal in a very general way with a large number of named antibiotics, or (c) those that deal with specific antibiotics which have not been separately listed in *MeSH*.

The user who is interested in one concept may find that the broader term is also worth examining for articles of possible interest. Although one may be interested primarily in penicillin sensitivity, articles on the general subject of antibiotic sensitivity may be useful.

The user who wants articles on some aspect of the use of antibiotics in pediatric practice would certainly want not only the general articles that would appear under "antibiotics," but also those concerned with specific antibiotics.

Because it is impossible to group together all terms directly or indirectly related to a particular concept, please consider the following when searching this bibliography:

1. Direct form of the term (e.g., Lung Abscess)
2. Inverted form of the term (e.g., Anemia, Hemolytic)
3. Synonyms or near-synonyms (e.g., Vertigo for Dizziness)

The *Cumulated Index Medicus* user generally starts with one or more medical terms in mind which express his own subject interest. If he does not find a given term in the alphabetical list, examination of an appropriate categorized list may reveal a synonym or a broader term under which the desired journal articles might have been indexed. When a usable term is found, examination of nearby entries in the alphabetical list may reveal related terms that are also worth searching in the *Cumulated Index Medicus* Subject Section.

4. Noun form (Liver, Kidney, Brain)
5. Adjective form (Hepatic, Renal, Encephalo-)
6. Function words which imply the concept in mind (Thinking for Brain)
7. Terms for techniques which imply the concept in mind (Angiography for Arterial Thrombosis)
8. Broader and narrower terms

The best way to find broader and narrower terms is by reference to the categorized lists in *MeSH*. For example, in category D3, under "antibiotics," one finds a list of several dozen antibiotics, including penicillin. Using a "specific" term, one may reenter the list to find still more specific terms, if such exist. Thus, using the term "penicillin" for entry into Category D3, one finds a group of still more specific kinds of penicillin. To go from a narrower to a broader term requires browsing through the list, unless the more general term is self-evident.

SUBJECT SECTION

Each article cited in *Cumulated Index Medicus* appears printed under several subject headings, which represent the most important concepts of that article. The entry appears in full under each subject heading. Each entry contains the following elements, in order: original English title of article or English translation of title in brackets; first author (if more than one) or sole author; journal title abbreviation; volume number; inclusive pagination; date of issue; the notation Eng. Abstr. for those non-English articles which provide an abstract in English; and an abbreviation indicating the language of the article if other than English. The non-English language abbreviations are as follows:

Afr	Afrikaans	Dan	Danish
Alb	Albanian	Dut	Dutch
Ara	Arabic	Fin	Finnish
Arm	Armenian	Fre	French
Aze	Azerbaijani	Geo	Georgic
Bul	Bulgarian	Ger	German
Chi	Chinese	Gre	Greek (Modern)
Cro	Croatian	Heb	Hebrew
Cze	Czech	Hun	Hungarian

Ice	Icelandic	Rum	Rumanian
Ind	Indonesian	Rus	Russian
Ita	Italian	Ser	Serbian
Jap	Japanese	Slo	Slovak
Kor	Korean	Slv	Slovene
Lit	Lithuanian	Spa	Spanish
Mul	Multilingual	Swe	Swedish
Nor	Norwegian	Tha	Thai
Per	Persian (Modern)	Tur	Turkish
Pol	Polish	Ukr	Ukrainian
Por	Portuguese	Vie	Vietnamese
Pus	Pushto		

Examples of typical citations are:

An article by JL Emery, H Nunn, and R Singhal, titled:

The cell population of dorsal root ganglia in children with neurospinal dysraphism. Emery JL, et al. Dev Med Child Neurol 15:467–73, Aug 73

is cited under four subject headings:

Ganglia, Spinal/Pathology
Hydrocephalus/pathology
Neurons/cytology
Spina Bifida/pathology

Under each of these subject headings, only the first author's name appears. (For the names of the second and third authors, refer to the Author Section.)

An article by B Stojan and three other authors is cited under the headings Clostridiopeptidase A/blood, Collagen/metabolism, and Sarcoidosis/ enzymology:

[Collagen peptidase as a measure of collagen turnover in sarcoidosis] Stojan B, et al. Schweiz Med Wochenschr 103:337–41 3 Mar 73 (Eng. Abstr.) (Ger)

The brackets indicate that the title has been translated. The title of the journal has been abbreviated; the full title may be found by reference to the abbreviations listing in the *List of Journals Indexed in Index Medicus*. The notation in parentheses indicates that this article has an English abstract.

Under each subject heading, the entries are grouped according to the original language of the text, with the English-language items appearing first, followed by citations for articles published in other languages, arranged alphabetically by language. Within each language group, the articles are alphabetically ordered by journal title abbreviation.

AUTHOR SECTION

References in the Author Section cite a maximum of three authors' names. The author's name is the first element in most Author Section citations. The title of the article in the vernacular appears next, followed by: journal title abbreviation; volume number; inclusive pagination; date of issue; and language abbreviation. The title of the article is supplied in translated form only (as in the Subject Section), and not in the vernacular, for citations in the following language: Arabic, Armenian, Azerbaijani, Chinese, Georgic, Hebrew, Indonesian, Japanese, Korean, Persian, Pushtu, Thai, and Vietnamese. Titles in the following languages are transliterated into Roman script: Bulgarian, Greek, Russian, Serbian, and Ukrainian.

Following are examples of citations found in the Author Section:

Fyfe MJ, Goldman ID: Characteristics of the vincristine-induced augmentation of methotrexate uptake in Ehrlich ascites tumor cells. **J Biol Chem** 248:5067–73, 25 Jul 73

Fyrö B: Biverkningar vid neurolpetikabehandling. **Lakartidningen** 69:89–94, 27 Mar 72 **(Swe)**

Fyrö B, Petterson U, Sedvall G: Pharmacokinetics of lithium in manic-depressive patients. **Acta Psychiatr Scand** 49:237–47, 1973

Complete citations are printed only under the first author's name; the second and third-authors' names are cross-referenced to the full reference under the senior author's name, as:

Goldman ID see Fyfe MJ
Petterson U see Fyrö B
Sedvall G see Fyrö B

Articles about individuals are cited in the Author Section with the subjects' names enclosed in parentheses and preceding the other components of the entry. A separate entry is also provided under the name of the author in the usual manner. Anonymous biographies and obituaries appear only under the subjects' names.

Example:

(Kahn E), Pokorny AD: Engen Kahn 1887–1973. **Am J Psychiatry** 130:822, Jul 73
Pokorny AD: Eugen Kahn 1887–1973. **Am J Psychiatry** 130:822, Jul 73

A separate subsection is provided at the end of the Author Section for anonymous non-English language article references. Special treatment is accorded the material in order to have an authentic reference to the journal article title in the original language form. In this subsection, the individual entries are arranged alphabetically under the journal title abbreviation.

MEDICAL REVIEWS

The articles cited in this section represent surveys of the recent biomedical literature. Each review article has documented data on latest findings.

The references have all appeared in the *Medical Review* section of one of the 1973 monthly issues of *Index Medicus*, in the *Medical Reviews* section, as well as in the Subject Section.

ABBREVIATION OF JOURNAL TITLES

In 1962 the National Library of Medicine published its rules for the abbreviation of journal titles[1] and used these rules through 1970. The practice followed in *Index Medicus* was changed in 1971.

The journal title abbreviations now used in *Index Medicus* are formulated according to the rules of the *American National Standard for the Abbreviation of Titles of Periodicals*,[2] and the individual words of the titles are abbreviated according to the forms given in the *International List of Periodical Title Word Abbreviations*.[3]

There is a detailed discussion of all journal title abbreviation rule changes in a recent article by Charen and Gillespie.[4] For the abbreviation of any specific journal cited in *Index Medicus*, see the *List of Journals Indexed in Index Medicus*, in this volume.

OTHER BIBLIOGRAPHIC TOOLS

In many specialized fields of medicine, and in many allied sciences, there are available a variety of excellent indexes and abstracts, such as *Chemical Abstracts* and *Biological Abstracts*. More than 2,700 titles with asterisks, marking basic references especially useful to the smaller medical library, are listed in *Medical Reference Works, 1679–1966: A Selected Bibliography* (Chicago, Medical Library Association, 1967). Special information centers sponsored by medical institutions or professional societies exist to serve users interested in their respective subject fields. For current information about such additional aids relating to special subject interests, the *Cumulated Index Medicus* user should consult his local medical librarian.

Users of *Cumulated Index Medicus* are invited to send suggestions or refer any errors they find to the attention of:

PREFACE TO 1973 MeSH

The 1973 issue of Medical Subject Headings (MeSH) is presented as the primary listing of subject descriptors which appear in Index Medicus (IM), the NLM Current Catalog, and other recurring, bibliographies derived from the MEDLARS* data base.

As in earlier editions, this issue provides an alphabetic listing with cross-references, and a section containing the categorized, hierarchic structures. Librarians and scientists who seek access to the MEDLARS citations should always consult Medical Subject Headings before searching either the printed bibliographies or the computerized store of citations. This will ensure the identification of all relevant terms.

For the rapidly increasing number of health science users who have direct, on-line access to the MEDLINE data base stored in the National Library of Medicine computer in Bethesda, it should be emphasized that there are several additional publications which can be of major assistance to the searcher. These are the Permuted MeSH, the Alphabetized MeSH with Provisionals, and the MeSH Tree Structures. These publications are available through the National Technical Information Service, U.S. Department of Commerce, Springfield, Virginia, 22151. (See inside front cover.)

The Library wishes to express its gratitude to the many scientists who have had sufficient interest to criticize various terms in MeSH and to make suggestions for its improvement. They thus assist the Library in its efforts to keep abreast of knowledge in the expanding fields of the health sciences.

*MEDLARS -- Medical Literature Analysis and Retrieval System

MeSH INTRODUCTION

The 1973 Edition of MEDICAL SUBJECT HEADINGS is the current revision of the authority list for the subject analysis of the biomedical literature in the National Library of Medicine. It presents the subject headings under which all citations will appear in INDEX MEDICUS, serves as the basis for search formulations in retrieval by computer of bibliographic citations stored on the MEDLARS (Medical Literature Analysis and Retrieval System) tapes, and is the standard subject heading list for the subject cataloging of books in the Library.

Format

MEDICAL SUBJECT HEADINGS is divided into two sections. The Alphabetic List section contains the Subject Headings arranged in alphabetic order and cross referenced. The Categorized Lists section displays the terms in separate categories arranged hierarchically and semantically with an alphanumeric designation for each category and subcategory. The categorized lists are not a complete classification system for every biomedical discipline since they contain only those terms which have been selected for inclusion in this vocabulary. Reference to this listing from the alphabetic list is obtained by using the category number attached to each term. All the terms appear at the margin in upper case; narrower terms appear also in lower case indented under a broader term; those that are most specific have no indented terms beneath them. A cardinal rule of indexing is to use the most specific term available, e.g., articles concerning streptomycin will be found under the heading STREPTOMYCIN, while an article concerning a new agent which is not yet in the vocabulary will be listed under the broader term ANTIBIOTICS.

The user of the Categorized Lists can select an entry term that most nearly describes the concept in which he is interested and, by reviewing the category in which the term has been placed, find there the majority of the subject headings expressing additional concepts within his area of interest. The Categorized Lists make it possible to have fewer "See also related" cross references in the Alphabetic List. See Cross References below.

The subject headings have been constructed primarily for the convenience of the user of INDEX MEDICUS, therefore, direct natural-language sequence is not always used. When a group of terms share a basic concept they are arranged sequentially under that concept and not scattered throughout the alphabet. For example, tuberculosis in its various forms and relationships is expressed by a series of headings starting with TUBERCULOSIS; (TUBERCULOSIS, AVIAN; TUBERCULOSIS, BOVINE; TUBERCULOSIS, CARDIOVASCULAR).

The criteria for selection of subject headings are based on: frequency of term usage in the medical literature; recognition of need for the term by the various users of MeSH; recommendation by advisory panels on terminology; and the ability to assign a relatively clear and precise definition to the term.

Cross References

The usage of cross references in the Alphabetic List has been continued as in previous editions of MeSH. Entry terms such as synonyms or inverted forms of main headings are given priority.

Referring to Another term	Corresponding "referred from" designation
See	X
See under	XU
See also related	XR
See also specific	XS

The "See" reference directs from a synonym to the term appearing in MeSH. "See under" is used to refer from a specific term not in the list to a more general heading under which it is indexed.

The "See also related" reference is used primarily to indicate related terms not occurring in the same category that may contain citations of direct pertinence to the area of interest. As in previous editions the most obvious cross references, as those from an organ to its diseases, are avoided.

The "See also specific" continues to be used sparingly since the categorized listing provides for the more specific subterm to be listed under the general term. Its chief usage is to direct the user to the specific elements of a subject heading appearing in a different category.

New Headings and Deletions

A listing of the 577 new headings which have been introduced with this 1973 revision and the headings under which the majority of the articles relating to the concepts were previously indexed is included. Following this is the list of 23 deleted headings and the subject headings which have replaced them for indexing purposes.

Subheadings

No additional subheadings have been added to the 60 in current use. However, there has been reassignment of some to additional categories and there have been a few minor changes in definition and scope. It is recognized that not every subject heading in a category is suitable for use of all subheadings assigned to it. Therefore, a familiarity with the definitions of the subheadings will be of assistance to the users of INDEX MEDICUS.

Abnormalities (A) - Used with organs for congenital defects producing changes in morphology of the organ.

Administration & Dosage (D) - Used for dosage forms, routes of administration, frequency and duration of administration, quantity of medication and the effects of these factors.

Adverse Effects (D, E, H, J) - Used with drugs, chemicals, biological and physical agents and manufactured products for unintended or undesirable reactions occurring in normal usage or accepted dosage; includes hypersensitivity or idiosyncrasy.

Analysis (A, B, D, G, J) - Used for the identification or quantitative determination of a substance or its constituents; includes the analysis of tissues, body fluids, plants, air, water or other environmental carrier; applies to both methodology and results. For analysis of substances in blood, cerebrospinal fluid and urine the specific subheading designating the fluid is used.

Anatomy & Histology (A, B) - Used with organs, regions, and tissues for normal descriptive anatomy and histology; used also for normal anatomy and structure of animals.

Antagonists & Inhibitors (D) - Used with chemicals, drugs and endogenous substances having specified biological or physiological effects, to indicate substances or agents which counteract these effects by any mechanism.

Biosynthesis (D) - Used for the formation of chemically definable or chemically characterizable substances by living processes, either in organisms or in living cells.

Blood (C, D, F) - Used for the presence of or analysis of substances in blood; also for examination of, or changes in, the blood in disease states; excludes serodiagnosis and serology.

Blood Supply (A) - Used for arterial, capillary and venous vascular systems of an organ or region whenever the specific main heading for the vessel does not exist; includes the blood flow through organ or region.

Cerebrospinal Fluid (C, D, F) - Used for the presence of or analysis of substances in the cerebrospinal fluid; also for examination of or changes in cerebrospinal fluid in disease states.

Chemical Synthesis (D) - Used for the chemical preparation of complex substances from simpler substances.

Chemically Induced (C, F) - Used for diseases, syndromes, congenital abnormalities and symptoms caused by chemical compounds in man or animals.

Classification (B, C, D, E, F, G, H, I, N) - Used for taxonomy of invertebrates, vertebrates (other than man), bacteria, viruses, fungi, and plants; also for classification systems relating to specialized scientific disciplines or fields.

Complications (C, F) - Used with diseases to indicate conditions following or existing as a complication of the disease; sequelae; used also for the concept of coexisting diseases.

Congenital (C) - Used with disease headings to indicate those conditions existing at, and usually before, birth; excludes morphologic abnormalities and birth injuries.

Cytology (A, B) - Used for normal cellular morphology of unicellular and multicellular organisms.

Diagnosis (C, F) - Used for all aspects of diagnosis, including examination, differential diagnosis and prognosis; excludes mass screening.

Diagnostic Use (D, H) - Used when chemical compounds, drugs or physical agents are administered for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.

Drug Effects (A, B, F, G) - Used for the effect of drugs and chemicals on an organ, region, or tissue; on bacteria, viruses, fungi, plants, fetus, embryo, and physiological processes.

Drug Therapy (C, F) - Used for the treatment or the prevention of disease by the administration of drugs, chemicals and other therapeutic agents, such as antibiotics, biologicals, and tissue extracts. Excludes diet therapy.

Education (F, G, H, I, M, N) - Used for education and training programs in specialty fields and for special groups of persons.

Embryology (A, B, C) - Used under organs and regions for embryologic and fetal development; also used under diseases for embryologic explanations of postnatal disorders.

Enzymology (A, B, C, F) - Used for enzyme studies, including inhibition, kinetics, etc., in tissue, plants, microorganisms, and invertebrates; also used for studies of enzymes during the course of disease. Does not include diagnostic enzyme tests.

Etiology (C, F) - Used for the causative factors of disease including microorganisms or other disease factors; includes factors associated with an increased risk of disease such as environmental, social, and personal factors; includes pathogenesis.

Familial & Genetic (C, F) - Used for studies of genetic basis of disease; studies of disease occurring in family groups due to infection, common family dietary habits or environmental factors; also indicates hereditary disease.

Growth & Development (A, B) - Used for growth or development of plants, microorganisms and the postnatal period of animals; includes postnatal growth or development of organs or anatomical parts.

History (C through N) - Used for the historical aspects of any subject; includes brief historical notes. Excludes case histories.

Immunology (A, B, C, F) - Used for immunologic studies of tissues, organs, bacteria, viruses, fungi and their constituents; includes immunologic aspects of specific diseases but not immunologic procedures used for diagnostic, preventive, or therapeutic purposes.

Injuries (A) - Used for traumatic wounds and injuries of parts of the body.

Innervation (A) - Used for nerve supply of an organ, region, or tissue.

Instrumentation (E, F, G, H, J) - Used with diagnostic or therapeutic procedures, analytic technics, and specialties or disciplines, for the development or modification of apparatus, instruments, or equipment.

Isolation & Purification (B, D) - Used for methods employed to obtain a pure culture or strain of microorganisms. Includes culture technics. Also for the separation and purification of the active constituents of biological substances.

Manpower (E, F, G, H, I, L.N) - Used for the demand, supply, distribution, recruitment and use of personnel in the various health disciplines.

Metabolism (A, B, C, D, F) - Used for metabolic processes occurring in organs or regions, or the organism as a whole; includes the study of metabolism in disease states; includes absorption, distribution, biotransformation and excretion of drugs; and the absorption, distribution, breakdown products and excretion of nutrients or their constituents. For biosynthesis, enzymology or secretion, the specific subheading is used.

Microbiology (A, C) - Used for microbiological studies of organs, regions and diseases.

Mortality (C, E, F) - Used for statistics of mortality resulting from disease or as a result of procedures.

Nursing (C, E, F) - Used for nursing care and technics in diseases; includes the nursing role in diagnostic, therapeutic and preventive procedures.

Occurrence (C, F) - Used for incidence and prevalence of endemic and epidemic disease; includes surveys and estimates of morbidity in geographic areas, subdivisions of the population, or time trends. Includes mass screening.

Pathogenicity (B) - Used for studies relating to the ability of a microorganism to cause disease in man or animals.

Pathology (A, C, F) - Used for organ, tissue or cellular structure in disease states; includes biopsy and postmortem examination.

Pharmacodynamics (D) - Used for actions of drugs and exogenously administered chemical substances upon tissues and organisms; includes effects on metabolism, acceleration or inhibition of biological processes, and the mechanisms of action.

Physiology (A, B, D) - Used for normal functions of organs, tissues and cells of unicellular and multicellular organisms. Used also with biochemical substances, endogenously produced, for the physiologic role of the substance.

Physiopathology (A, C, F) - Used for study of function in disease or the study of function as modified by disease.

Poisoning (D, J) - Used with drugs or chemicals for human or animal poisoning, acute or chronic, whether the poisoning is accidental, occupational, suicidal, homicidal, by self medication, by medication error, or by environmental exposure.

Prevention & Control (C, F, G) - Used for increasing human resistance against disease (e.g. immunization); control of transmission agents; or control of environmental hazards; includes preventive measures in individual cases.

Radiation Effects (A, B, D, G) - Used for effects of ionizing and nonionizing radiation upon living material and its constituents, and upon physiological processes.

Radiography (A, C, F) - Used for x-ray examination of normal anatomic structures and for radiography in the diagnosis of diseases.

Radiotherapy (C, F) - Used for application of ionizing and nonionizing radiations for therapeutic purposes.

Rehabilitation (C, F) - Used for the restoration of function, to the maximum degree possible, of a person or persons suffering from disease or injury.

Secretion (A, D) - Used for the discharge across the cell membrane, into the intracellular space or ducts, of endogenous substances resulting from the activity of intact cells of glands, tissues or organs.

Standards (D, E, F, H, I, J, L, N) - Used with facilities, personnel or programs for the development, testing and application of standards of adequacy or acceptable performance; used with chemicals and drugs for standards of identification, quality and potency; includes health or safety standards in industries and occupations.

Supply & Distribution (D, E, L, N) - Used for the quantitative availability and distribution of material, equipment, health services, facilities and personnel. Excludes food or water supply.

Surgery (A, C, F) - Used for operative procedures on organs, regions, or tissues in the treatment of disease states.

Therapeutic Use (D, H) - Used for the administration of drugs, biological preparations and physical agents in the prophylaxis and treatment of disease processes; includes veterinary use.

Therapy (C, F) - Used for all therapies except drug therapy, radiotherapy, and surgery; also to be used for those articles dealing with multiple therapies.

Toxicity (D, J) - Used for experimental studies of the ill effects of agents administered to man or animals; includes studies to determine the margin of safety or the reactions accompanying administration at various dose levels; used also for studies of exposure to environmental agents.

Transplantation (A) - Used for transplantation of normal organs or tissues from one site to another within the same subject, or from one subject to another of the same species or different species.

Urine (C, D, F) - Used for the presence or analysis of substances in urine; also for the examination of, or changes in, the urine in disease states.

Utilization (E, L, N) - Used for the actual use of equipment, health facilities, health services and personnel in the health occupations.

Veterinary (C, E) - Used for naturally occurring diseases in animals, or for diagnostic or therapeutic procedures used in veterinary medicine.

APPLICATION OF MEDICAL SUBJECT HEADINGS IN BOOK CATALOGING

The National Library of Medicine uses *Medical Subject Headings* as the authoritative source for cataloging books and periodicals added to the collection. For cataloging, however, the *MeSH* list is modified by the use of form and geographic subheadings and by four additional topical subheadings. The form subheadings are:

abstracts
atlases
audiotapes
audiovisual kits
bibliography (bibl.)
biobibliography (bio.-bibl.)
biography (biog.)
catalogs
collected works
congresses
dictionaries (dict.)
directories (direct.)
encyclopedias (encyc.)

Additional main headings to be subdivided geographically are those for the specialties, *Medicine, Science, Dentistry*, etc., and those that have the topical subheading: "education", "history", "legislation", "occurrence", "prevention & control", or "supply & distribution". Directories of specialists in the field, history of the practice in one locality, etc. are given the specialty heading subdivided by place.

Four topical subheadings which are not used for indexing serials and do not, therefore, appear in the list of *Subheadings* are necessary for the cataloging of books and periodicals. These are:

in adolescence (C, E, F, G)

in infancy & childhood (C, E, F, G)

in old age (C, E, F, G)

in pregnancy (C, E, F, G)

CUMULATED NEW HEADINGS

1973 Supplement

The cumulated list of New Headings for prospective searching of Cumulated Index Medicus was published in the 1971 Medical Subject Headings. On the following pages a supplement to that list is presented, based upon the introduction of the New Headings for 1973.

The listing is alphabetically arranged for the term which has been replaced or further subdivided by a more specific heading printed directly following the old term.

Users of Cumulated Index Medicus who are performing prospective bibliographic retrievals should consult these lists in order to assure that all citations on the subject will be found.

EXAMPLE:

1968 Adrenal Cortex Hyperfunction - Adrenal Gland Hyperfunction.

Prior to 1968 citations on hyperfunction of the adrenal gland appeared under Adrenal Cortex Hyperfunction. This term was deleted in 1968 and replaced by Adrenal Gland Hyperfunction.

1972. Death - Brain Death

Death remains as a main heading in 1972, but the specific concept, Brain Death, was introduced in 1972. Citations concerning Brain Death that previously were listed under Death no longer will appear under that term but are listed under the specific term Brain Death in the 1972 Index Medicus.

WRITING
- Authorship

Wherever possible, the use of terms for groups of persons has been avoided because of the close relationship between these groups and the activity in which they are engaged. Preference has been given to the broader term for the activity (e.g. Mining rather than Miners). The groups included here are those in which primary emphasis is placed on the individual or for which no satisfactory activity name is available.
